

1 **(3) CLAIM AMENDMENTS**

2
3 1. (PREVIOUSLY SUBMITTED) A computer annotator system for accessing Internet data
4 addresses, the system comprising:

5 an electronic tablet having visible marking capability;

6 a marking stylus associated with the tablet;

7 a device for associating at least one temporarily marked location on said tablet with a
8 preselected Internet data address wherein subsequently accessing said marked location with
9 said stylus triggers a shift to said data address associated with said marked location.

10
11 2. (ORIGINAL) The system as set forth in claim 1 comprising:

12 said tablet having at least one predetermined first surface region accessible to said
13 stylus wherein annotating function commands are implemented.

14
15 3. (PREVIOUSLY SUBMITTED) The system as set forth in claim 2 comprising:

16 said table having at least one predetermined second surface region accessible to said
17 stylus wherein freehand symbols indicative of the preselected data address are entered.

18
19 4. (PREVIOUSLY CANCELLED)

20
21 5. (CURRENTLY AMENDED) A method for indexing computer-accessible Internet sites,
22 the method comprising:

23 accessing a first of said sites;

24 associating an address indicative of the first of said sites with a first location coordinate
25 address on a computer writing tablet via a first visible marking a first random location on said
26 writing tablet during access of said first of said sites;

27 accessing a second of said sites; and

28 associating an address indicative of the second of said sites with a second location
29 coordinate address on [[a]] the computer writing tablet via a second visible marking on a
30 second random location on said writing tablet during access of said second of said sites.

1 6. (PREVIOUSLY SUBMITTED) The method as set forth in claim 5 further comprising:
2 continuing said method for a plurality of computer-accessible internet sites other than
3 said first and said second as long as there is available space for a further visible marking.
4

5 7. (PREVIOUSLY SUBMITTED) A method as set forth in claim 5 comprising:
6 erasing a said visible marking on said writing tablet after a last access to an associated
7 address indicative of a computer-accessible internet site.
8

9 8. (PREVIOUSLY SUBMITTED) A method for using a computer writing tablet, the method
10 comprising:

11 associating an input-output port of the tablet with signals indicative of Internet-
12 associated computer data addresses;

13 when each of a plurality of the Internet-associated computer data addresses is
14 accessed, writing a mnemonic object associated therewith respectively, wherein a location on
15 said tablet of the mnemonic object is coupled to a current one of said Internet-associated
16 computer data addresses; and

17 accessing any specific one of said plurality of the Internet-associated computer data
18 addresses by selecting the mnemonic object associated therewith.
19

20 9. (ORIGINAL) The method as set forth in claim 8 comprising:
21 predefining specific locations on said tablet with data indexing functions.
22

23 10. (ORIGINAL) The method as set forth in claim 9 comprising:
24 erasing each said mnemonic object for disassociating a location from the current one of
25 said computer data addresses associated therewith.
26

27 11. (CURRENTLY AMENDED) A computerized method comprising:
28 accessing an internet site; and

1 associating an address of the site with a writable-erasable mnemonic device in a
2 computer writing tablet such that said site is re-accessible directly from said writable-erasable
3 mnemonic device.
4

5 12. (ORIGINAL) The method as set forth in claim 11 comprising:
6 providing writing table function keys associated with writing-erasing a mnemonic device
7 on said computer writing tablet.
8

9 13. (ORIGINAL) The method as set forth in claim 11 comprising:
10 providing predetermined coordinate regions of the writing tablet such that each said
11 mnemonic device is automatically associated with one of said predetermined coordinate regions
12 when entered therein.
13

14 14. (ORIGINAL) The method as set forth in claim 11 comprising:
15 automatically alternating access between a plurality of addresses accessed and
16 associated with mnemonic devices by alternating current selection between said mnemonic
17 devices with a writing tablet writing instrument.
18

19 15. (PREVIOUSLY SUBMITTED) A computer memory comprising:
20 computer code for recording temporary symbols associated with an Internet site
21 address;
22 computer code associating the Internet site address with a writable-erasable mnemonic
23 device in a computer writing tablet for receiving said temporary symbols; and
24 computer code for accessing said Internet site address via said temporary symbols.
25

26 16. (PREVIOUSLY CANCELLED)
27

28 17. (CURRENTLY AMENDED) An internet search tool comprising:
29 an internet access device;

1 in communication with the internet access device, a writing tablet and associated inking
2 stylus; and

3 associated with the combination of internet access device, writing tablet and stylus,
4 program code using said tablet for generating bookmarks thereon related to respective search
5 resultant internet sites such that said sites are accessible directly via said bookmarks.
6

7 18. (ORIGINAL) The tool as set forth in claim 17 wherein each of said bookmarks is a
8 handwritten mnemonics associated with a internet site address.

C 9
10 19. (ORIGINAL) The tool as set forth in claim 17 wherein each of said bookmarks is a
11 temporary representation of coordinates on said writing tablet.
12

13 20. (ORIGINAL) The tool as set forth in claim 19 wherein each of said bookmarks activates
14 a jump from a current internet site address to an internet site associated with another selected
15 one of said bookmarks.
